---

- |  |                           |
|--|---------------------------|
| • HTML   | • CSS                     |
| • JavaScript                                   | • React                   |
| • Responsive layouts                           | • Redux/ Redux Toolkit    |
| • CSS-in-JS(Styled Components)                 | • SCSS/Sass               |
| • Jest and React Testing Library(Unit testing) | • Node.js/Express/MongoDB |
| • TypeScript(learning)                         |                           |

### SOFT SKILLS

---

Communication	Team player
Critical thinking	Problem-solving

### PROJECTS

---

#### E-commerce site- MERN stack app [↗](#)

using React, Redux Toolkit, React Router, CSS-in-JS(Styled Components), a REST API built with Node.JS, Express, MongoDB, JWT

Initially, a frontend project, now converted to a fullstack application with authentication.

Currently working on migrating to TypeScript.

Users can:

- sign in/sign up
- navigate different pages
- add products to "favorites"
- increase/decrease the number of products in the cart.
- see details about individual products

### **Task Manager - MERN stack app**

*using React, Redux, React Router, Styled components, REST API built with Node.js, Express, MongoDB, JWT*

A Task Manager application with authentication

Users can:

- sign up or sign in
- update profile information, delete account
- create/read/update/delete tasks

### **Movie&Tv Search with Unit Testing**

*using React, React Router, Context API, SCSS, The TMDB API, Jest and React-Testing-Library*

A movie and tv search app. Pagination was implemented from scratch for this project. Added Unit Testing for components.

Users can:

- click the cards to see additional information about the movie/tv show.
- search for either movie/tv and get results

### **Game of Thrones rolodex with Unit Testing**

*using React, CSS, The Thrones API, Jest and React-Testing-Library*

Users can

- search for their favorite characters
- view a random quote by one of the characters, and generate another quote by clicking the button.

### **Quizzical**

*a quiz app-using React and The Trivia DB API, CSS*

This is a Scrimba solo project.

Users can:

- select the question category and difficulty level
- select an option and on clicking "check answers", a score will be displayed along with the correct option.
